## Education

September 2017 – April 2022

### University of Waterloo | Bachelor of Computer Science

- Going into 4B of a Bachelor of Computer Science
- **Relevant coursework**: CS 341 (Algorithms), CS 446 (Software Architecture), CS 458 (Security)

## Skills

C++ • Java • Javascript • Kotlin • LaTeX • Python • SQL • Scala • Typescript

## Experience

September 2021 – December 2021

### Software Engineer Intern | Yugabyte

C, C++, PostgreSQL

- Designed and implemented tablespaces for tablegroups to assign colocated tables to specified clouds, regions, and zones, allowing for row-level geo-partitioning
- Updated YSQL grammar, cluster load balancer, and YSQL dumps to handle new tablespace features

May 2021 – August 2021

### Software Developer Engineer Intern | Amazon

Java, Kotlin

- Designed, managed, and implemented a new API bridge that uses client configurable "profiles" to efficiently handle two million requests per day across several clients and decrease latency by 15%
- Lead design discussions and involved stakeholders to ensure the highest standards for scalability, client customization, and enforcing invariants.

September 2020 – December 2020

### Compiler Engineer Intern | Huawei

Python, C++

- Dramatically reduced time-to-debug by designing and implementing a script to identify the failing shader and optimization pass of an image generated with the new Bisheng GPU compiler
- Combined several debug channels on a simulated device to rule out 80% of potential root causes

January 2020 – April 2020

### Backend Developer Intern | Faire

Kotlin, PostgreSQL

- Increased Faire's contribution margin by 180bps by implementing payment assistance plans and allowing the risk team to make timely, informed decisions by surfacing relevant customer and Plaid data
- Decreased customer support ticket count by 9% through heuristics to auto-handle common requests
- Refactored customer invoices for correctness, consistency across mediums, clarity, and simplicity

## Projects

January 2021 – April 2021

### Joos Compiler

Scala

- Compiles Joos 1W, a large subset of Java, directly into assembly for CS 444 (Compiler Construction)
- Designed and implemented scanning, parsing, analysis, and code generation in Scala

June 2020 – September 2020

### Crop Companion

Java

- Created an Android app that generates a planting schedule for a balanced diet for a varying population
- Implemented and tested the calculations, and designed and implemented various input screens

January 2019 – Present

### Resume Creator

Python, LaTeX

- Implemented a Python script and LaTeX template to generate a resume from YAML
